

FloraFood

GLUTEN FREE

NON GMO

VEGAN

A glass bottle of **FloraFood** holds 60 vegan capsules, each containing three billion live cells that remain stable at room temperature: no refrigeration required.

A baby's gastrointestinal tract was once thought to be sterile before birth, and microbe colonization was believed to begin during the birthing process. A 2016 study suggests otherwise, concluding that colonization of the microbiota may start before birth. At the same time, for the first twelve months of life, a baby's gut microbiota is compositionally simple yet integral for long-term health and shaping the adult microbiota.

bit.ly/BabyMicrobiota

FloraFood increases the presence of healthy bacteria with a trio of probiotics: ***Lactobacillus gasseri***, ***Bifidobacterium bifidum*** and ***Bifidobacterium longum***.

Your gastrointestinal tract is the home of roughly 100 trillion microorganisms. This monumental population includes fungi, protozoa and viruses, but the microbiota majority are bacteria. These dominant microorganisms are known to be beneficial for a number of reasons, including the ability to synthesize both essential and nonessential amino acids, produce a number of vitamins and perform bile biotransformation. bit.ly/HundredTrillion

Lactobacillus gasseri isolated from infants proved to be one of two species that showed benefits for immune health while having the highest probiotic potential. bit.ly/Lgasseri

Bifidobacterium bifidum is a dominant bacterial species in the gut microbiota of infants. Also present is ***Bifidobacterium longum***. However, the aging process lowers the presence of both species. bit.ly/Bbifidum_longum

AIM Business Builders Take Note:

A 2021 survey of more than 13,000 consumers in 16 countries revealed significantly increased use of probiotics.

bit.ly/SurveyProbiotics

FloraFood's probiotic formula introduces 3 strains of good bacteria to repopulate your gut, delivering 3 billion live cells per capsule. Good bacteria actively support healthy digestion and communicate among body systems to maintain good health.

Lactobacillus gasseri is normally present in the digestive and urinary tracts, helping to strengthen a healthy immune system and aid digestion.

Your microbiome is comprised of essential microbial life. Scientific research continues to reveal the benefits of having a diverse multitude of bacterial strains. It's as though the microbiome is a virtual organ of your body that keeps you healthy.

bit.ly/MicrobiotaHealth

Microbes are tiny living things that you can only see with a microscope. Dietary probiotics are the good kind of microbes.

The non-profit International Probiotics Association (IPA) reports that there are more than 53 million probiotic users across the USA alone. The majority are millennials. Globally, sales of probiotics in 2018 topped 5.6 billion US dollars.

FloraFood's

probiotic formula delivers three different strains of good bacteria that help to balance out gut flora, maintain digestive health and enhance the functions of the microbiota.

The M-Words

Microbiota: community of microorganisms

Microbiome: the genetic material of a microorganism community

These words are often used interchangeably in the vast research being done on the vital relationship between gut bacteria and good health. FloraFood supports the body's microbiota and microbiome.

Over 100 trillion microbes populate the human gut. Each capsule of FloraFood introduces 3 billion live cells of good bacteria that help keep the microbial population and body healthy.

Probiotics may help with or relieve the symptoms of:

- Traveler's diarrhea
- Digestion problems
- Immune system health

A 2015 study of older adults revealed that the participants who took the same probiotic mix of beneficial bacteria in FloraFood maintained levels of immune-protective T helper cells while reducing inflammation-producing cytokines. Changes in their microbiota made them similar to those of younger, healthier people. bit.ly/ProbioticTrio

FloraFood

Probiotics for a
Healthy Balance
of Intestinal Flora

Lactobacillus gasseri
is a probiotic, or
friendly bacteria, that
can adhere to the
microvilli to properly
recolonize the gut.

Astounding Probiotic Facts

- Beneficial bacteria may be responsible for two-thirds of our immune response.
- Probiotics play a role in the production of the B vitamins, vitamin K and vitamin A.

WHO Needs Probiotics?

- Those who consume artificial sweeteners
- The stressed
- People who eat GMOs
- Anyone with a skin condition

3,000,000,000 (three billion) CFUs

FloraFood guarantees one billion CFU (colony forming units) per capsule prior to expiration. Other companies might have labels that read “at time of manufacture” to deter from the fact that their products lose much of their potency on the shelf. FloraFood ensures full potency until expiration. With FloraFood, you are sure to get the suggested amount as long as you take it prior to expiration.
